METHOD OF MANAGING THE IRAP UNIT

Please provide a description of the management of the IRAP unit with the assumption that it will become a globally recognized center of scientific excellence that is able to effectively commercialize the results of its research. In your answer, please include:
1. the autonomy of the IRAP Unit in terms of primarily making decisions on substantive matters (including the selection of research topics), selecting the best R&D employees, and the method of obtaining funds for its activities;
2. confirmation that the Head researcher of the project will be directly subordinate to the Applicant's management, if the IRAP unit is to be separated in the Applicant's structure;
3. autonomy of the Head researcher of the project in making substantive decisions regarding the implementation of the project, personnel and administrative issues related to the functioning of the IRAP unit;
4. monitoring good practices and using modern methods of managing a scientific unit and possibly in the commercialization of scientific research in leading centers of excellence;
5. the role planned for the International Scientific Committee and possibly the role of other advisory bodies;
6. cooperation with other entities, with a Partner unit from abroad or other scientific unit and possibly with a business partner, the aim of which will be to achieve the goals set in the Research Agenda;
7. the manner of supporting the IRAP unit by the Applicant, including at least ensuring appropriate legal conditions enabling the implementation of the project and appropriate conditions for scientific work;
8. administrative structure of the IRAP unit ensuring appropriate support during the project implementation.

It should always be taken into account whether the presented approach is adequate to the purpose of the IRAP program.
